

Power— Where You Need It

Don't limit your possibilities.

When completing store layout planning and design, you need flexibility to place your products where your customer's behavior will be influenced. Product placement frequently requires power supply modifications to keep your products fresh, as well as enhance the ambience of the space.

Loeb Electric is here to help with these electrical needs. We've completed thousands of "power drop" projects for the biggest retailers in the world—from refrigerated berry cases to warming ovens.

We ensure your products are where you need them, re-routing power to anywhere you need it "dropped" in the store.

As with all our services, this includes:

- **Detailed statement of work**
- **Securing and managing labor**
(nationwide network of prequalified electrical contractors)
- **Use of Project Management software**
(includes job tracking, reports, and pictures)
- **Off-hours installation**
(reduces store disruption)
- **Post-install walkthrough**
(ensures satisfactory job completion)

Loeb Electric is more than a material supplier—we deliver custom and turnkey solutions to help you stay competitive, adding *value* at every opportunity.

With Loeb, it's easy. For more information, visit **LoebElectric.com** or call **800.686.6351**.
