

Sustainability Statement

Updated January 2020

At Loeb Electric, we believe that we have an obligation—to our employees, our communities, our customers, and the environment—to operate our business sustainably.

As a supplier of energy-efficient products, Loeb Electric has been recognized time after time by electric utility businesses for energy efficiency and was most recently recognized as an Energy Star Partner and the winner of the 2018 American Electric Power (AEP) Ohio Energy Efficiency Award.

Our stewardship to drive sustainability is accomplished through the following:

Reducing our environmental footprint.

- Retrofit office, warehouse, and retail spaces from inefficient lighting to energy-saving products
- Installation of occupancy sensors and other controls across warehouse and office areas
- Implementation and encouragement of internal recycling programs across all operations
- Disposal of mercury-based and other hazardous lamps in accordance to EPA guidelines, using a third-party vendor for the proper shipment and reclamation of the mercury
- Transportation of goods in a manner that minimizes community and environmental impacts

Supporting sustainable development.

- Educating the business community on the use of lighting and electrical controls as a first-line energy reduction solution
- Enhancing our use of sustainable packaging solutions
- Selecting and providing environmentally produced products and technologies
- Working with manufacturers to reduce the amount of on-site waste generated during the construction and/or maintenance of properties
- Providing customers with job-site material recycling solutions
